

EXPLANATION OF TERMS

Micron (mic): the mean fibre diameter of all fibres measured.

SD: The standard deviation of fibre diameter. SD is a measure in microns either side of the mean fibre diameter in which 68% of fibres lie.

CV: The co-efficient of variation of fibre diameter.

CF: Comfort factor percentage (%) - 0% of fibres above 30 micron = 100% comfort factor

ACTUAL: The measurements taken at 9 months for that individual animal

YWT: Yearling body weight in kilograms

YFWT: Yearling fleece weight in kilograms

YSL: Yearling staple length in millimetres

YEMD: Yearling eye muscle depth in millimetres

YFAT: Yearling fat depth in millimetres

ET: Embryo transfer

MP+: Merino Production + index focussing on genetic improvement of fleece weight, fibre diameter, body weight as well as staple strength and reproduction. Designed for producers where income is a combination of wool and surplus sheep sales.

DP+: Dual Purpose + index focussing on genetic improvement of fleece weight and body weight as well as reproduction, carcase traits and staple strength. Designed for producers looking for a balance of income from wool from merinos and meat production from lambs by terminal sires.

Lots 84 through to and including 92 are a younger group. Please note the different group average for these animals.
